

Resource-Aware ML Meetup 2026 – Day 1

Raphael Fischer | Lamarr Institute | TU Dortmund University | Young AI Leaders Dortmund

Partner institutions:

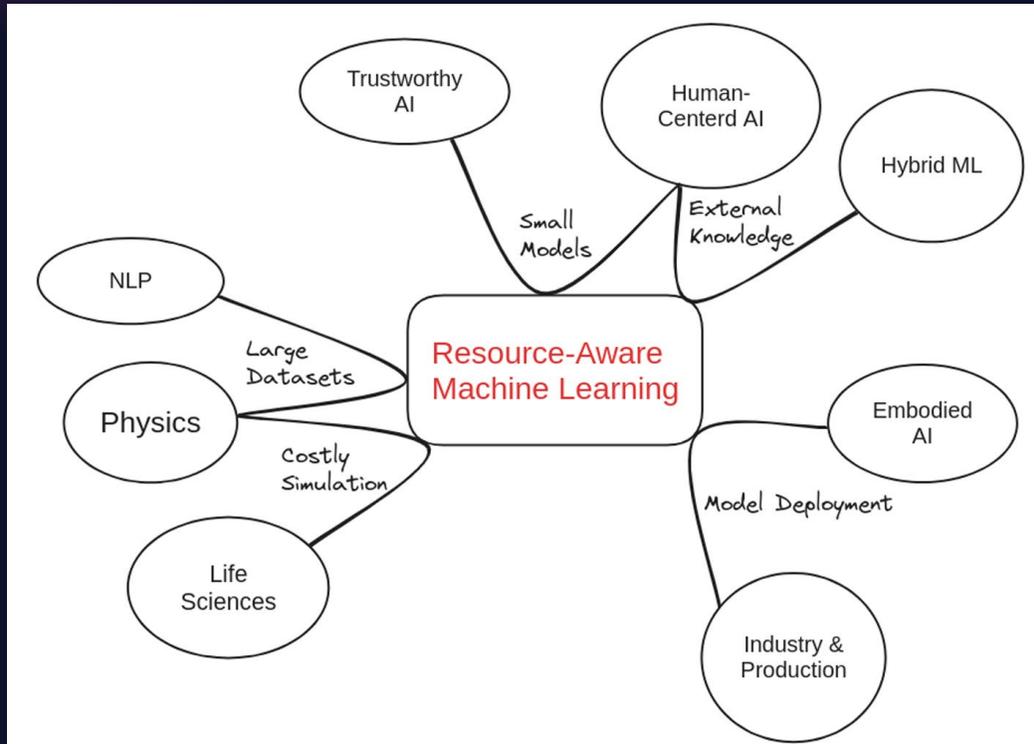

Institutionally funded by:

Ministerium für
Kultur und Wissenschaft
des Landes Nordrhein-Westfalen

Welcome to the Meetup!

We now have 1.5 days to discuss how our work connects to resource-awareness. It is all about getting to know each other, and identifying opportunities for collaboration. Let's do this!

Partner institutions:

Institutionally funded by:

All information, materials, and notes are collected in the **Indico Event**.

The full **program** will take place in different parts of this building (except for tonight's dinner).

Need a room for privacy, or have other questions?
Reach out to **Raphael, JJ & Youssef**.

RAML – Areas and their Resources

RAML – Important Conferences & Deadlines

We already established the diversity of RAML.

But where do you meet your community?

RAML – Talking Points

Lamarr Institute's PR team prepares for engaging with and responding to public AI debates that connect to our research.

They need our research expertise. 🤝 Our expertise needs visibility.

So - what are the talking points and our positions in RAML?

Note: Carolin Winter and Ann-Kathrin Oster will join us later.

RAML – Talking Points

Lamarr Institute's PR team prepares for engaging with and responding to public AI debates that connect to our research.

Example talking points:

1. Energy efficiency needs to become central evaluation focus.
2. Responsible AI necessitates quantification of resource demand.
3. Power concentration in hardware & data challenges innovation.

“

[Fischer 2025a / Sevilla et al. 2022] (Epoch AI)

→ **Initiate a paradigm shift in reporting!** [Fischer et al. 2024]

This allows us to develop and use AI in sustainable ways!

→ **Challenge the bigger-is-better paradigm!** [Varoquaux et al. 2025]

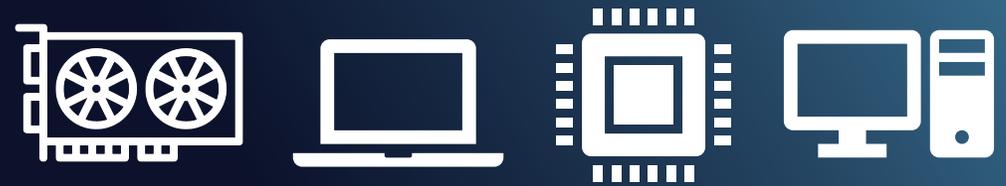

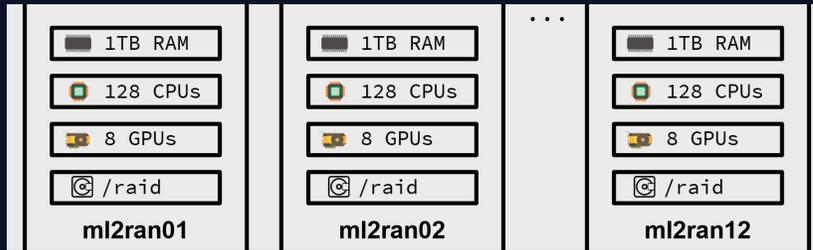

This should be an important joint effort at Lamarr Institute!

To be **resource-aware** and **trustworthy**, we have to inform on the **energy-versus-quality performance** of our methods!
Assessing this trade-off becomes easier thanks to

github.com/lamarr-institute/lamarr-energy-tracker

Computing on the Cluster?

Automatic tracking of energy consumption with personalized reports → launching soon!

Computing on Custom Setup?

Use the LET library for tracking and reporting the energy consumption of your experiments!

LET - Lamarr Energy Tracker

A simple wrapper around [CodeCarbon](#) for tracking and reporting local energy consumption from Python.

Features

- 🌱 Simple extension to CodeCarbon software
- 👤 Three lines of code to report on environmental impacts of your research experiments
- ❤️ Help to make Lamarr Institute more resource-aware

Installation

As a Python library, you can simply install it by running

```
pip install lamarr-energy-tracker
```

github.com/lamarr-institute/lamarr-energy-tracker

```
from lamarr_energy_tracker import EnergyTracker

# Either use as a context manager
with EnergyTracker(project_name="your_research_project") as tracker:
    # Your resource-heavy code here
    pass

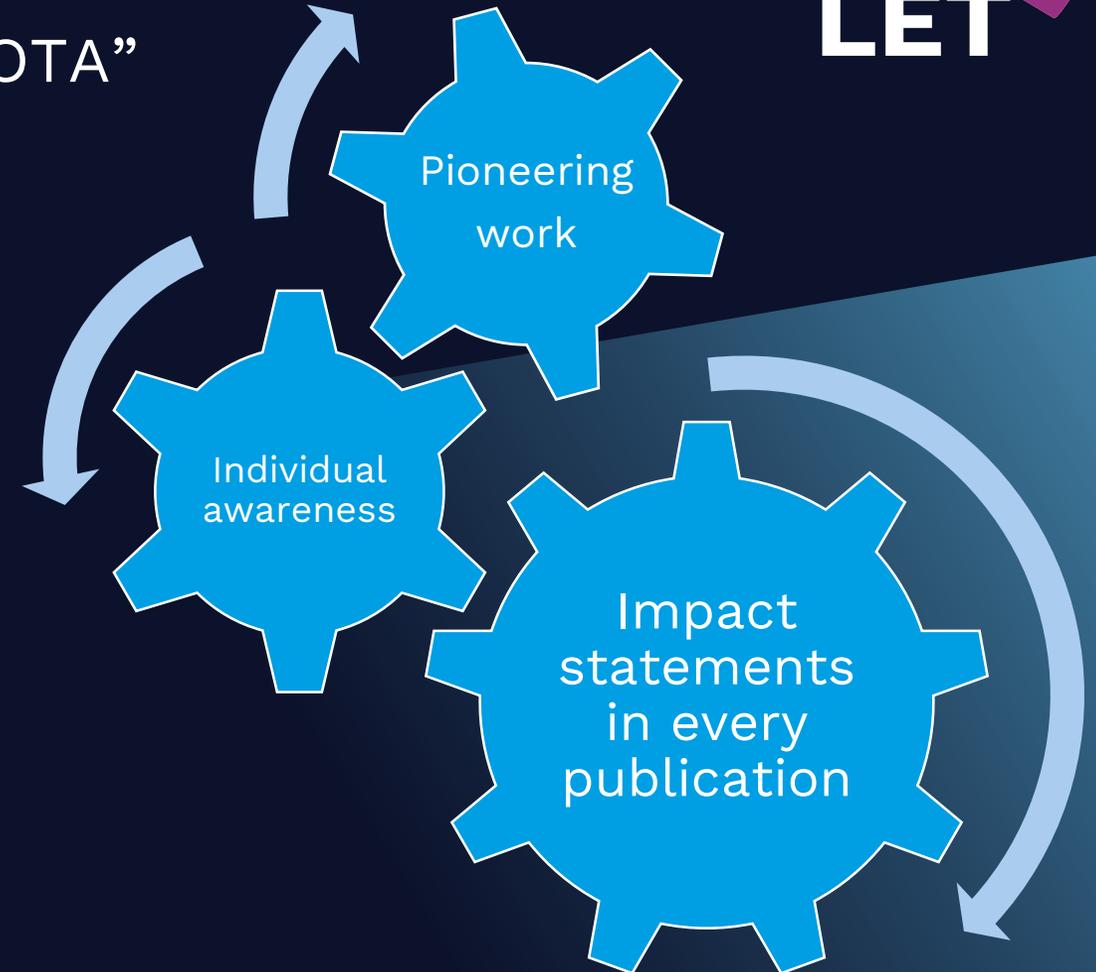

# Or manually
tracker = EnergyTracker(project_name="your_research_project")
tracker.start()
# Your resource-heavy code here
tracker.stop()
```

“Using CodeCarbon 3.0.8, the energy consumption of running all experiments on an Intel(R) Core(TM) i7-10610U CPU is estimated to 0.135 kWh. This corresponds to estimated carbon emissions of 0.051 kg of CO2-equivalents, assuming a carbon intensity of 380 gCO2/kWh.”

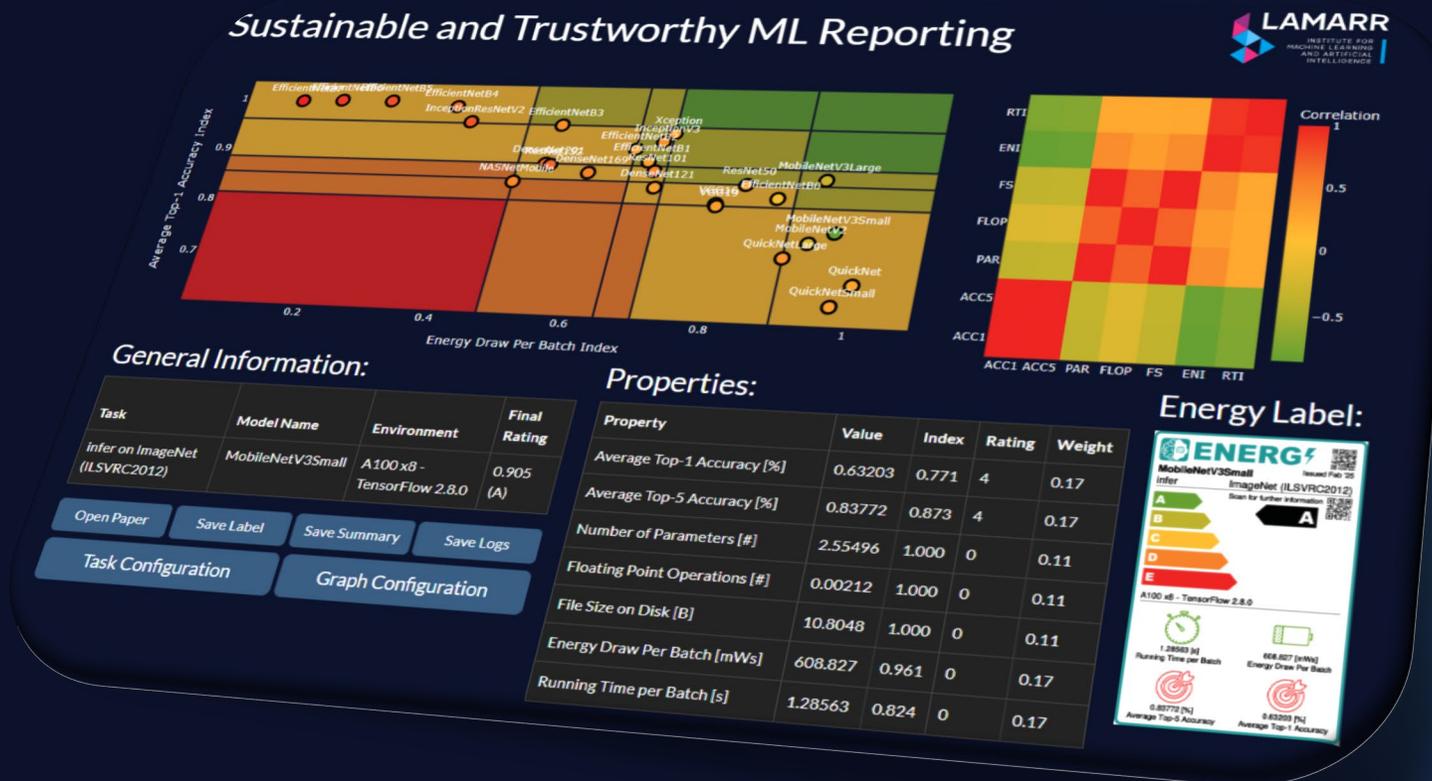

Resource-awareness benefits:

- You gain a new understanding of “SOTA”
- You can discuss the efficiency and sustainability of your research
- Your work might become more environmentally friendly
- We can connect different research groups @ Lamarr
- We might become a pioneering research institute for Green AI
- We can perform meta-studies on compute demand

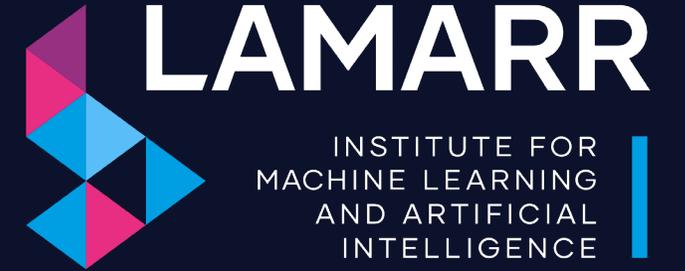

Integrate LET with Mlflow & STREP

To investigate the multi-dimensional performance of AI models!

TL;DR - LET's all become more resource-aware @ Lamarr!

Lunch (Cantina, JvF25 basement floor)
- 13:00 – 14:15 Idea Building & Pitching
Wrap-Up & End of Program

Interactive Clustering

We start with characterizing everyone's work along specific dimensions.

Individually, write down as many keywords as you like:

*Types of learning tasks (blue), data (green), methods & theories (red),
resources (yellow), hardware (pink), software (orange), other aspects (white)*

Afterwards, we interactively cluster them, to identify structures and collaboration possibilities in the multidimensional space of our work!

Wrap-Up Day 1

- **Area Organization** (Proposal to be discussed):
 - Mattermost for central communication
 - Central slide deck!
 - PI & Postdoc bi-monthly area coordination meeting at 11:00
 - Monthly seminar at 11:30 → 30 min freestyle on last interesting paper
 - Last / first DAY (tbd) of each month
 - Central Area Meetups as part of Lab Visits & Co
- Who is interested in identifying and answering **Talking Points in RAML?**
- Any open **questions** or feedback?

**See you at dinner (18:30)
or tomorrow (9:00)!**

Clustered Dating

Yesterday we identified some topic clusters - today we have time for discussing them in more depth! Over two sessions, attend any topic you like!

	11:00	11:30
Co-working 1:	Transformers & LLMs	Probabilistics
Seminar:	Time Series	Tabular Data
Deep Dive:	Optimization	Performance Trade-Offs
	Sustainable Development?	

Please try to **mix and balance**. And keep the **idea building** afternoon in mind ;)

Idea Building & Pitching

Hopefully, some rough ideas were sparked during the Meetup!

Please gather in groups (3-5 people) and prepare a short idea pitch (~5 min).
Any topic, presentation style and outcome (paper, workshop, ...) is welcome!

13:00: Idea building

13:45: Pitch & Feedback Round

Feel free to spread across the available rooms!
